HDS VACUUM PIPESTILL ON STREAM

V2AR, the first HDS unit on stream on the reclaimed land area in the lagoon, is on stream at a feed rate of 60 MB/D. The design feed rate is 115,000 B/D and this unit is believed to be the largest operating Vacuum Pipestill in the world. Tar feed was introduced to the unit at 10:30 a.m.

Monday, April 26 and Tuesday morning on-specification sidestream products were being sent to the new 760 series storage tanks.

The vacuum pipestill startup was under the direction of Julio Curiel, recently promoted shift foreman. Julio has been on a special assignment preparing all the details for this startup.

Congratulations to Julio and the many experienced Lago, ERE and TOA HDS personnel assisting him.
